

Final Questions

Network Modeling for Epidemics 2025

Questions for You

- In small groups and then in larger group...
 - What is your target population and disease (or process) of interest?
 - What is your (network modeling related) research question?
 - What are the key configurations of the network structure for your population & disease that you would want to include in a model?
 - How do those configurations directly connect to your research questions?
 - What are specific approaches (e.g., ergm terms) that you would use to implement those network configurations?
